ASYS GROUP SOFTWARE SOLUTIONS

DISCOVER OUR POWERFUL SOFTWARE SOLUTIONS

More than
100 PULSE lines
installed

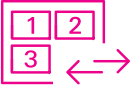

Over
5,000 MES
connections
realized

More than
12,000 Machines
connected

Our goal is to support the human factor in the production and make rapidly growing complexity manageable. With our Software Solutions we are providing smart functionalities which is turning the vision of an intelligent factory into reality today.

The ASYS Software Solutions are the right choice for the whole factory: Everything can be connected with our interfaces and open standards.

ASYS SOFTWARE FUNCTIONS AT A GLANCE

Statistics		Product Change	
 <p>Page 8</p>	Optimize your production with statistical analysis	 <p>Page 10</p>	Product changeover for complete line by one click

Machine Layer

The base of a Smart Factory is an overall connection of the entire shopfloor. All systems have to be connected to achieve a real added value. We are experts in implementing connections and interfaces between different systems and offering the right Software Solutions.

For the connection of machines of various vendors we make use of our own powerful "ASYS Standard Interface". Additionally we connect to supervisory systems with interfaces like IPC/CFX or SEMI SMT-ELS.

On top of that the ASYS Software Solutions handle the connection to MES and ERP systems. We have implemented already more than 5,000 connections to all common systems and orchestrate your shopfloor with strong features of our Factory Conductor.

„We are the translator, the mediator, the machine connector - the last-named has always been in our ASYS DNA. From hardware topics such as our connecting transport module to today's networking using software solutions. We are increasingly focusing on this topic: Thanks to our open standard interface architecture, we can implement any required connection language and network all software modules – manufacturer independent. As pioneers, we are also open to new interfaces in the future. To this day we do not believe that there will be only one standard for data transmission in the future, as there will not be a world language in the coming decades. Therefore, we are adapting to the new standards, but also offer the promised functionalities today with our solutions. Thanks to our philosophy of openness, we are already able to connect a complete SMT line, even the entire shop floor.“

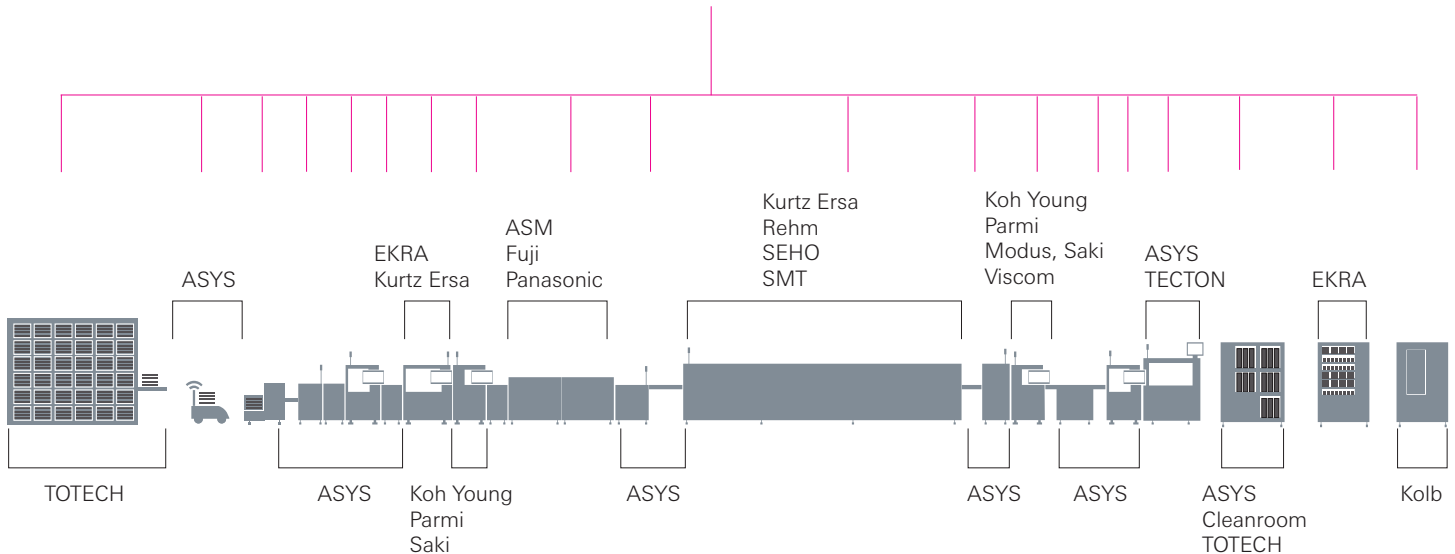

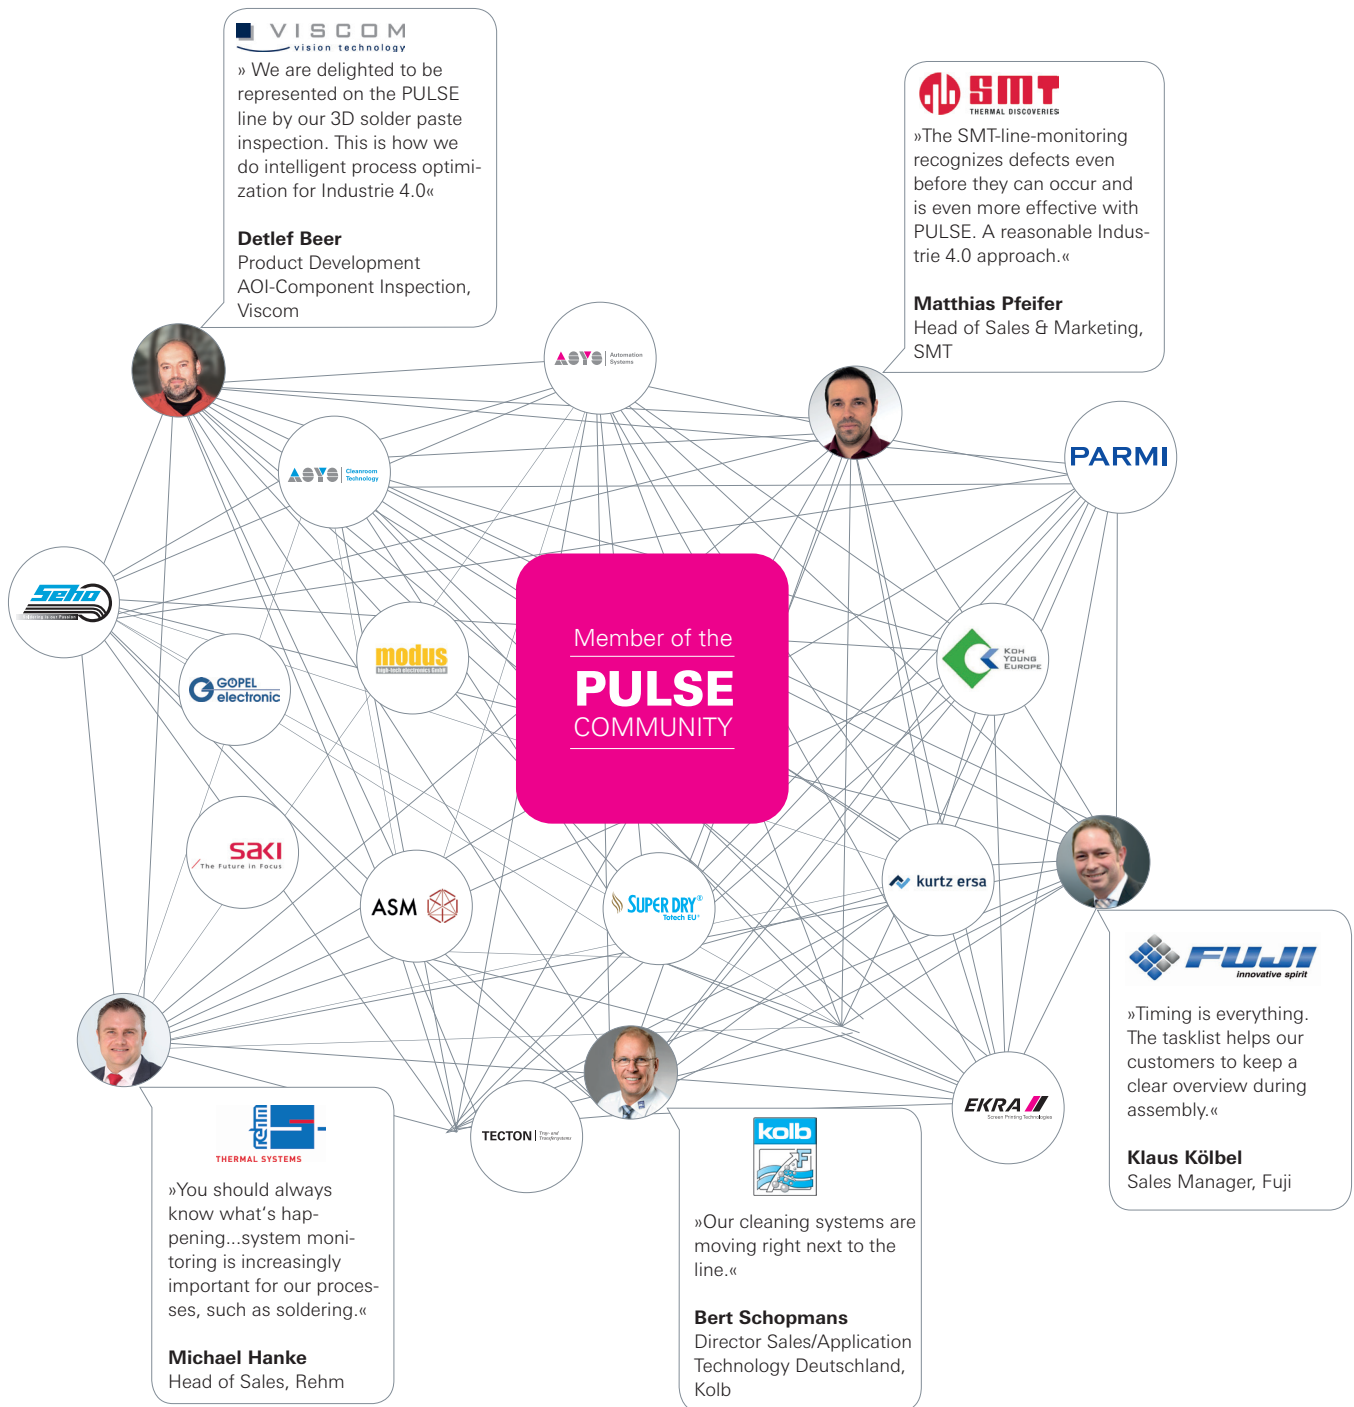

Senior Vice President Product
Management & Marketing
Erwin Beck

› THE PULSE-COMMUNITY

The PULSE-Community is a strong network of manufacturers in the electronics industry. All those manufacturers have already integrated the „ASYS Standard Interface“ for the connection of their machines to ASYS Software Solutions. Thanks to this standardized connection the entire production line can be connected today. We offer the „ASYS Standard Interface“ free for any other manufacturers, in order to provide a maximum flexibility and functionality to your entire production line.

CONNECTED TO PULSE

› STATISTICS

Optimize your Production due to Statistical Analysis

Our Software Solution provides statistical analysis and helps to improve the production process. Planners and operators are able to locate possible bottlenecks and sources of error through evaluations of the machine and plant data. This optimizes the capacity utilization of the production.

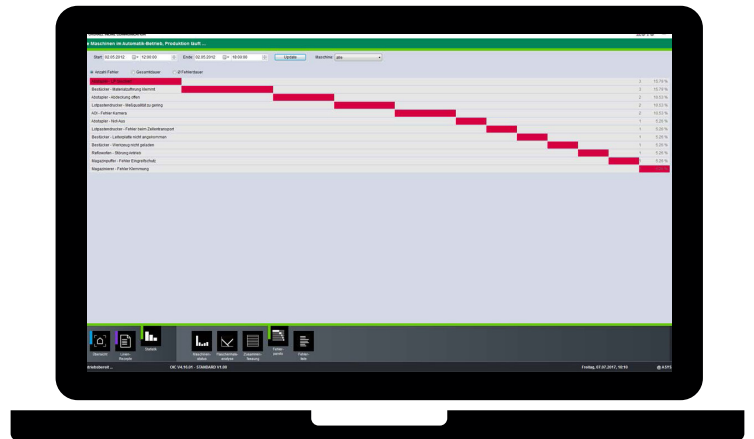

- › Statistics at a glance through visual display of cycle times of individual systems, standby times or set-up times
- › Optimization of line utilization and line planning
- › Supports planner and operator with software tool for evaluation of line performance

Bottleneck analysis:

Analysis of the material flow of all machines in a line

OIC ASYS Software Solution IC-Statistics

Error Pareto Analysis:

Central collection and analysis of error messages

› PRODUCT CHANGE

Product Changeover for Complete Line by One Click

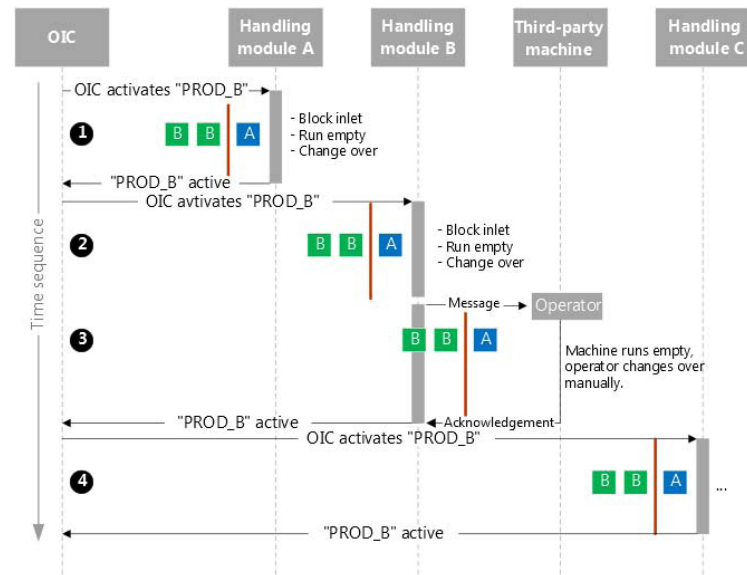

Stop losing time on product changeover with our Software Solution. With just one click, the changeover is triggered. The parameters are sent to all machines in the line. All settings are stored in a global database and can be checked, modified and duplicated at any time.

- › Product change of a line in a few minutes
- › Simple, controlled product changeover of the entire line
- › Database with central product management and line control
- › Integration of all ASYS Group machines as well as third-party systems
- › Reuse of existing programs

OIC ASYS Software Solution IC-Run

- › Simple creation of line recipes, editing of VEGO Dynamic programs
- › Faster NPI compared to programming on individual systems
- › Avoidance of conversion errors

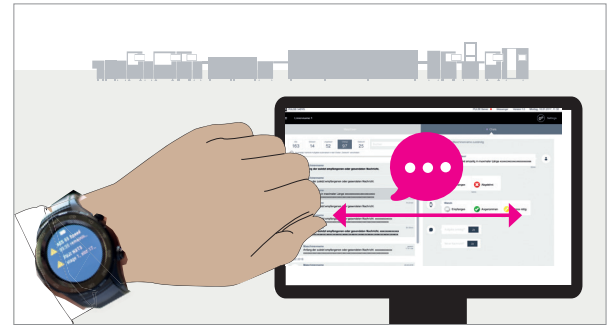

› MESSENGER

Request Specific Support by Using Integrated Messenger

The PULSE Messenger is an extensive chat application in our system for the communication among employees in the factory. It enables a multitude of possibilities for the usage. Tasks can be distributed faster and operators can easily request help. The messenger is flexibly usable on PC's and Smartwatches.

- › Save walking routes with integrated messenger
- › Request help from supervisor
- › Send tasks from central station to operators at the line
- › Determination of which operator takes over a task

- › Fast communication among employees through messages via PULSE smart watches
- › Universally applicable
- › Replying to messages with PULSE smart watches
- › Storage of message histories

› NOTIFICATIONS

Increase Output by Shortening Micro Stops with Notifications on Your Wrist

The primary goal of smart assistance systems is, to support operators in their daily work. Intelligent data transmission helps to react immediately and prevent machine stops.

- › Receive notifications from all machines in the line
- › Avoid unnecessary stops with pre-warnings of empty material
- › Reduce reaction time with an immediate notification
- › Clear assignment of interruption and guidance for the operator

PS ASYS Software Solution
PULSE Alerts&Info

Customization and Optimization of Notifications

- › Optimization of the visual and haptical feedback of a notification
- › Blocking of notifications not required
- › Optimal planning of employees at the lines
- › Clear allocation of responsibilities

PS ASYS Software Solution
PULSE Alert Manager

PS ASYS Software Solution
PULSE User2Machine

› MONITORING

Keep Control by Overviewing all Lines

The ASYS Software Solutions offer a variety of monitoring options to keep track of all connected machines. The operator always knows what is going on in every situation. All for the purpose of keeping production running and increasing productivity. Discover our various functionalities for machine monitoring.

- › Live video on PULSE devices
- › Free placeable camera
- › Monitoring of critical processes

PS **ASYS Software Solution**
PULSE Live-View

- › Service information can be requested
- › E.g.: Serial number of the machine, ASYS support hotline and software version

PS **ASYS Software Solution**
PULSE Support-Me

- › Centralized access to machine specific documents on mobile devices
- › Documents can be supplemented and extended

PS **ASYS Software Solution**
PULSE File-Box

- › Software shows the number of all currently produced products in relation to the target and minimum throughput
- › Monitoring tool directly at the production line or in the office

OIC **ASYS Software Solution**
IC-Performance

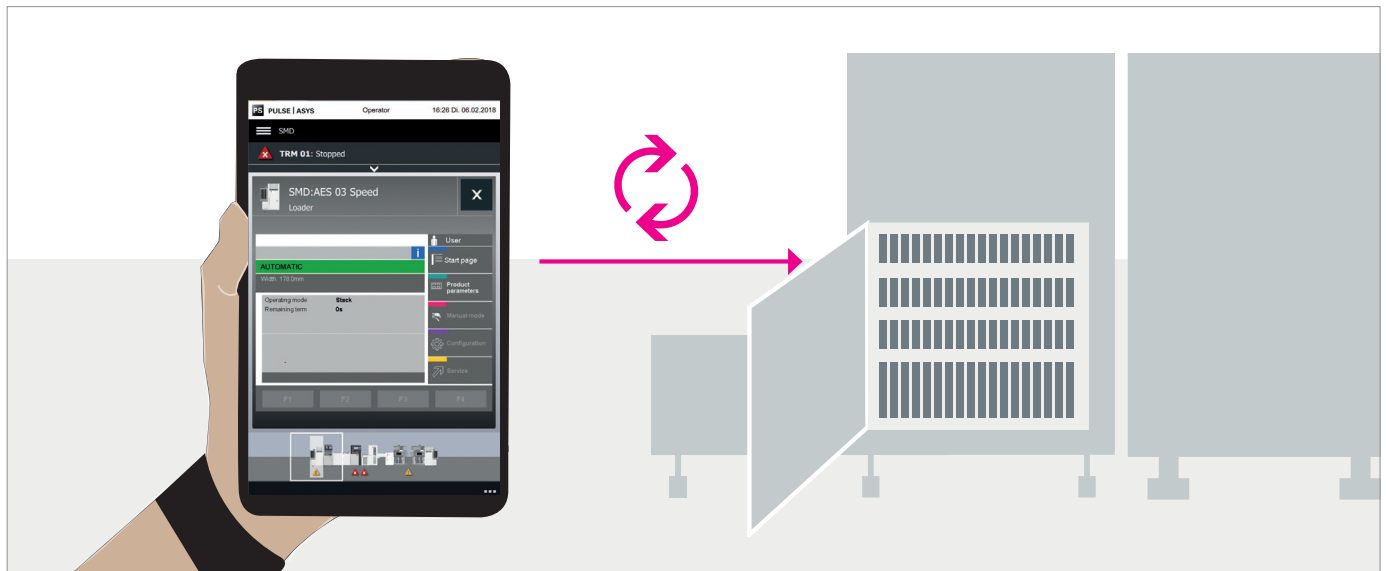

› REMOTE CONTROL

Support Operator by Remote Machine Operation

The user interface of machines can be displayed on tablets and PCs. It allows you to operate and monitor machines regardless of their current location. This is a powerful support for the operator on the line. The machines can be operated from the back. These functions are protected by user authorization.

- › Access control panel of the machine on Tablets and PC
- › Secured operation with user authorization
- › Support operator with remote assistance
- › Operate machine while standing at back side

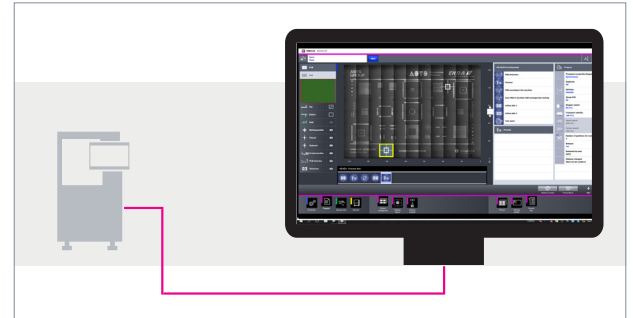

› PROGRAM PREPARATION

Offline Programming of Machine Programs on any Computer for Shortest NPI (New Product Introduction)

With the ASYS Offline Programming Tools the machines can be programed during the operation. This significantly reduces downtimes during the production.

- › Offline programming during production
- › No production shutdown
- › No multiple programming required
- › Can be installed on any PC

ASYS Software Solution

INSIGNUM Offline Programming Tool

DIVISIO Offline Programming Tool

- › Share data by one data source for all INSIGNUM systems
- › Connection to MES possible

ASYS Software Solution

INSIGNUM Product Pool

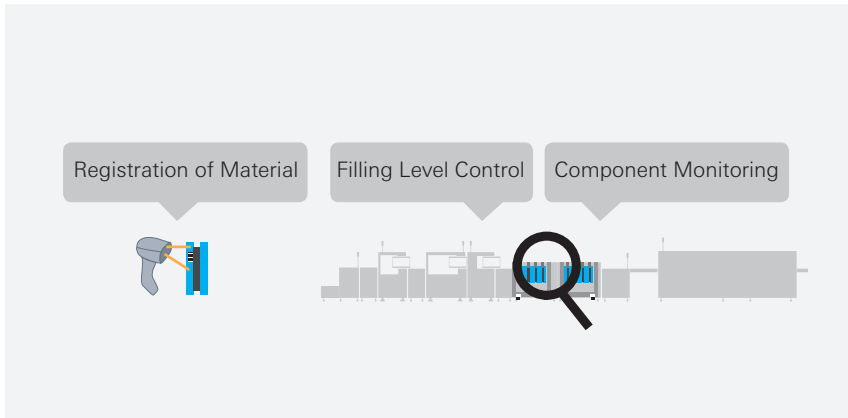

› MATERIAL

Automate, Control and Trace all Material Flows and Types

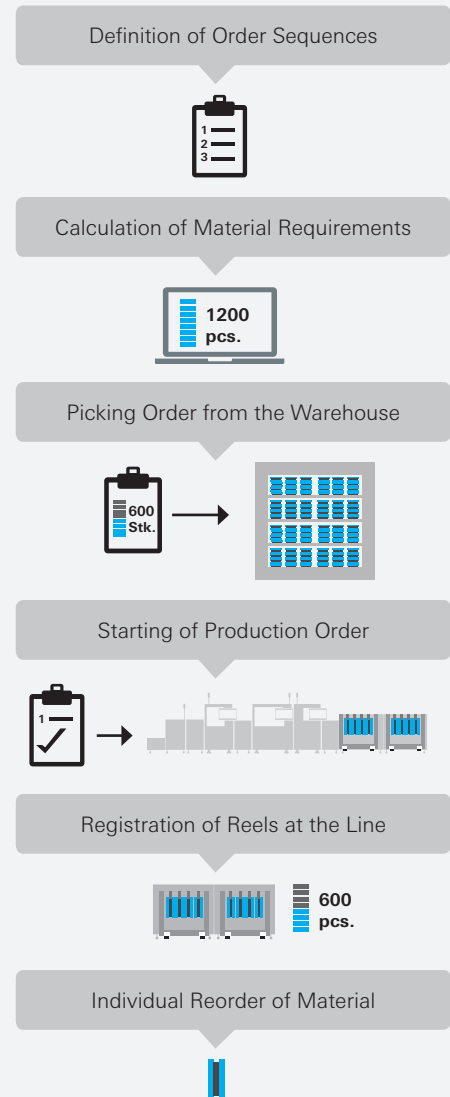

More transparency and efficiency in the electronics manufacturing. The ASYS Material Software provides you with a modern, web-based and modular product platform that takes your quality management to a new level.

- › Order/production detail planning: e.g. definition of an order sequence, rescheduling
- › Calculation of the material requirements for x-orders
- › Comparison of required material for x-orders to the current filling level
- › Preparation of picking orders for the warehouse
- › Starting of production orders, that are finalized in the set-up preparation area
- › Registration of reels at the line: Unique ID, filling level and more
- › Registration of changes in the filling level at the pick-and-place process
- › RFID or AIVs integrable into process

ASYS Software Solution
Material Manager

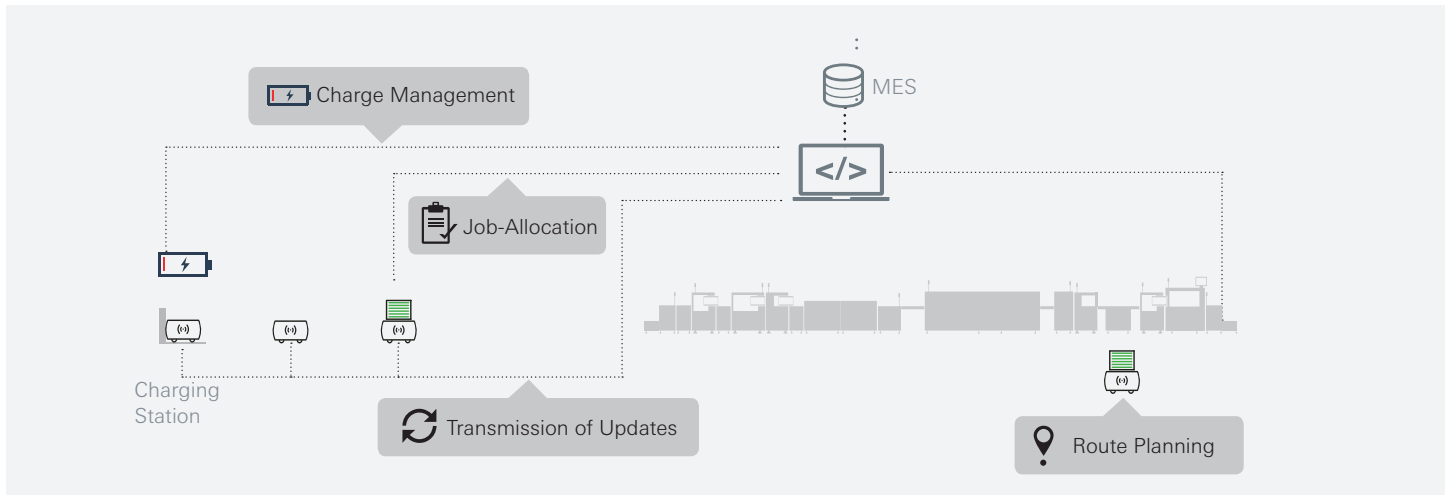

ASYS Software Solution Logistic-Package

- › Integration of all logistic modules
- › Status determination of all stations
- › Machine connection
- › Fully integrated material supply

ASYS Software Solution Fleet-Manager

Route Planning

- › Coordination of AIV-fleets, planning of traffic flows for an optimized loading and unloading
- › Allocation of jobs, administration of „skills“ and transfer of tasks to a suitable equipped AIV
- › Charge management
- › Transmission of updates for the entire fleet

ASYS Software Solution MSL-Manager

Registration of Storage/Dispensing

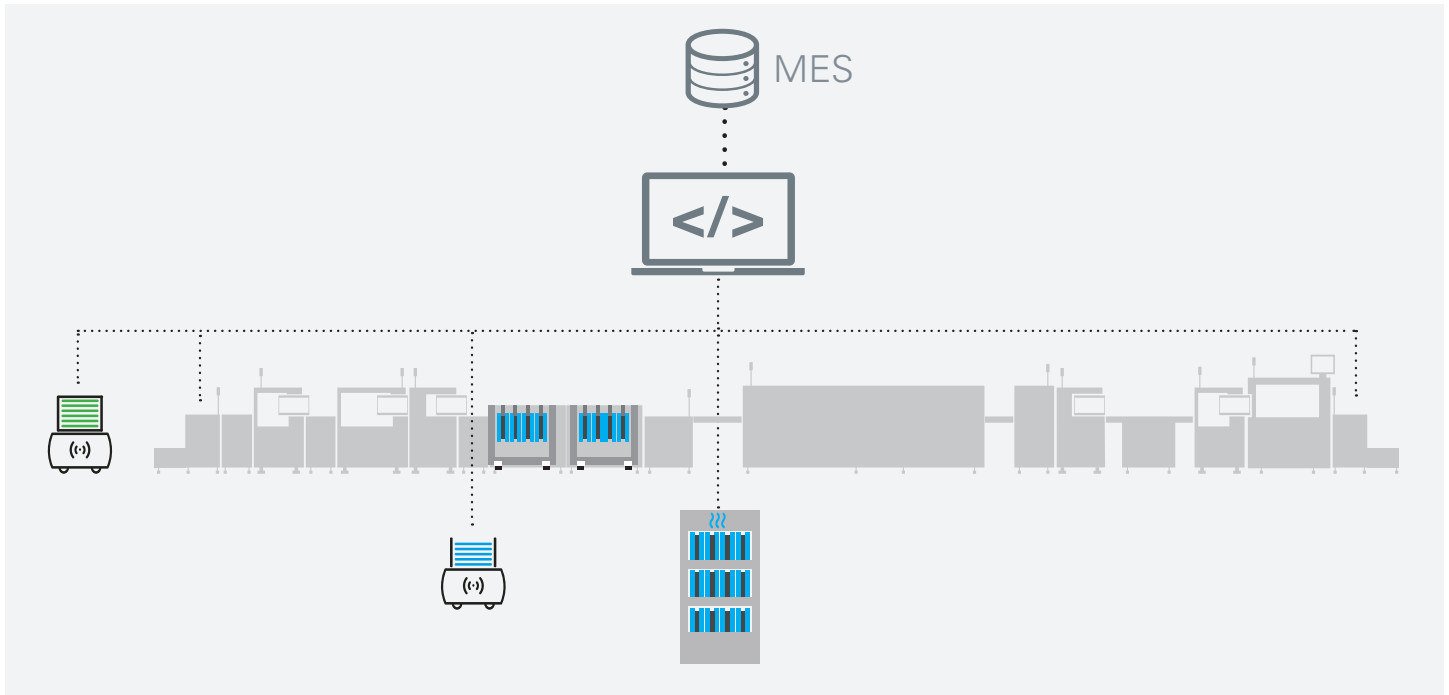

Monitoring of Cabinets

- › Cabinet monitoring: monitoring of humidity and temperature, data management of several cabinets, cabinet identification
- › Monitoring of components: registration of storage and dispensing, calculation of floor-life-time, documentation of the drying process
- › Component logistics: localization of components, traceability of all stock movements, providing information about unused material

ASYS Software Solution MES-Package

- › Interface for connection to higher-level software systems (e.g. MES, ERP and other 3rd party systems)
- › Standard interface or customer specific configuration
- › Seamless communication

ASYS SOFTWARE SOLUTIONS AT A GLANCE

Function	Software Solutions	Description	Devices			
Statistics 	 IC-Statistics	Statistical analysis of production				
Product Change 	 IC-RUN	Automatic product changeover of a whole line				
Notification 	 Alerts&Info	Informations, Warnings and Errors from machines				
	 Alert Manager	Modification of machine alerts				
	 User2Machine	Allocation of machines to users				
Messenger 	 Messenger	Complete messenger for communication in factory				
Monitoring 	 Live-View	Freely placeable camera with live stream to tablet or PC				
	 Support-Me	Access to machine service information				
	 File-Box	Storage and access for all types of documents				
	 IC-Performance	Overview of current throughput				

Function	Software Solutions	Description	Devices			
Remote Control	 Operation	Locally independent remote control of machine				
	INSIGNUM Offline Programming Tool	Offline programming for INSIGNUM marking systems				
	DIVISIO Offline Programming Tool	Offline programming for DIVISIO depaneling systems				
Program Preparation	INSIGNUM Product Pool	Share data by one data source for all INSIGNUM systems				
						
Material	 Material Manager	Consumption-oriented material management				
	 Logistic Package	Integration and connection of all modules for the autonomous transport				
	 Fleet Manager	Organisation and distribution of tasks for the AIV's				
	 MSL Manager	Monitoring and tracing the floor-life-time of moisture-sensitive components				
	 MES Package	Interface for connection to higher-level software systems

Line Monitor

PULSE at Katek

At Katek, PULSE has meant fewer machine stops and therefore increased line productivity. 40% of employees are using the PULSE smartwatch. The Bavarian electronics service provider recognized the benefits of PULSE early and therefore opted its production for the solution from the start.

Katek is using PULSE to solve the challenge of microstops on the production line. Its own system only generates an error message after five minutes at a standstill, so microstops often fall through the net. PULSE is able to catch and reduce the number of microstops.

ASYS will continue to provide support for the PULSE lines at Katek and monitor developments in production. The PULSE system may be extended to the remaining three production lines in the future, and the package will definitely be installed if production lines have to be replaced.

Georg Fahringer, Technical Officer at Katek, with Wolfgang Heyder, Sales Engineer at ASYS (from the right to the left)

With Notifications: Reaction Time reduced by 48%

One of our customers has evaluated the ASYS PULSE Mobile Devices. He compared the performance of his production line with and without support of smart assistance systems.

The result was obvious: The time between the occurrence of an error and the reaction to it could be reduced by 48% on average. The figures were convincing - the customer will continue to use the smart ASYS solutions to increase the productivity of his production.

Further Customer Feedback

Which experiences did
you have with PULSE
during running production?

We could reduce
walking routes of our
employees by more
than 30% per shift.

We could reduce
response times
to warnings and
alerts considerably.

We could reduce
response times
to warnings and
alerts considerably.

The use of smart watches
reduces stress and enables
to concentrate on the
most important tasks.
